The atelier 1053

We are all looking for a unique and personalized interior, but also for a certain authenticity: anchored in local activity, artisanal manufacturing and respectful of environment...

The Atelier 1053 designs and produces custom-made furniture and interior fittings for its private and professional customers.

Our history

Emmanuel Maussion has always been driven by pride and pleasure of woodworking. After training in cabinetmaking and joinery and many years of employment in the sector, his taste for human contact led him in 2016 to create the Atelier 1053.

Ludovic Jouneau, diagnostician mechanic, took a liking to woodworking with his grandfather. He therefore decides to retrain in cabinetmaking and joinery and meets Emmanuel during his training. They choose to join forces in 2019 to develop the Atelier 1053 together.

Both sensitive to customer contact, they share the same vision of their job, centered around people, know-how and local and environmental commitment.

Interior layout

The Atelier 1053 aims to find the **perfect layout** for each interior.

They offer their customers tailor-made support for the realization of their interior dreams:

- Optimization of spaces
- Personalization according to their aesthetic preferences
- Support throughout the project until installation

"Our know-how: finding the right balance between layout, design and material "

Examples of realization

"We come to your home to analyze and understand better your needs," explains Emmanuel, "then we design the project".

From 3D illustrations, it is then produced 100% in the workshop of Atelier 1053 in Ancenis (44).

The projects, tailor-made to be functional and aesthetic, range from the custom kitchen or bathroom to the complete realization of professional fittings or even custom furniture.

The furniture can be made in a large range of materials: solid wood, derivatives of wood like melamine, veneer, laminate, glass, aluminum, steel...

For Ludovic, "this combination of materials is also an opportunity to learn and discover by collaborating with other professions".

From interior design to the Rivières de France Tables

When Emmanuel and Ludovic discovered the "river" tables, an association of solid wood and resin from the United States, a crazy dream emerged in the minds of these two cabinetmaking lovers: adapting this manufacturing process to complete their range of custom-made furniture with **custom-made, aesthetic and eco-friendly** river tables for living and dining rooms.

For more than a year, they tested different solutions: they varied the woods, resins, structure, until they found the perfect combination:

- **Wood from local sawmills**
- **Epoxy resin from vegetal products** and **natural finishing oils** suitable for a food environment
- **A specific structure** to reinforce the table and guarantee its lifetime

 **TABLES**
Rivières de France

By **l'Atelier 1053**

The choice of materials, a major asset

"We rummage through the sawmills to look for atypical, very ribbed wood. This revaluation of authentic and raw materials guarantees the unique side of each table."

"You can find river tables from Eastern countries, but they use very chemical resins. We wanted to return to more environmentally friendly products."

"Each model is unique and even has its own name, that of a river in France."

A local and artisanal production

All the tables are made in Ancenis in the workshop of Atelier 1053, respecting the manufacturing processes and the values of the brand.

100% unique and customizable tables

All the elements of the tables can be personalized: dimensions, wood type, resin color, number of castings, table feet model...

Our values

- Listening and human care
- The rigor of our know-how
- Local dimension
- The respect of environment
